Questions? 877-755-5001 • Fax 303-755-4036 • bcc@bccspecialties.com

Measuring & Templates

- Inside mount is recommended. The use of multiple blinds within one common window frame, such as two angled blinds forming a pentagon, is not available.
- Templates may be required for Arched, Octagon, Hexagon and Parallelogram window shapes. Templates are not necessary for most Angled window shapes. Refer to the Templates & Measuring section and the Template Checklist for details.
- Mail the original template and/or measuring sheets to:

Email: bcc@bccspecialties.com

Templates Step by Step

- Determine where blind will mount. Inside mount is recommended and is required on certain shapes.
- Tape butcher paper with no folds or creases to the area where blind will fit allowing for overlap of paper.
- Position paper smooth and taut.
- Trace the outline of the window.
- While paper is still taped into position, use a carpenter's level to trace a level line onto the template within the dimensions of the window.
- Remove and cut the paper along the traced lines.
- Once the template is cut, test by placing it in the window opening.
- Mark all shade dimensions on the template (use the Template Checklist).

Note: When a window has a curve at the top with "straight legs," only the curve and a portion of the straight legs require a template, not the entire window.

Templates Checklist

A template may be required for all Arched, Octagon or Hexagon windows. A template is not required for Standard and Non-Standard Angled Blinds.

Instructions: Always write on the "room side" of the template. Include company name, telephone number & key contact as well as the customer sidemark. The following information is required on the template:

- Window Locator (Living Room Left, etc.).
- Mark a Level Line toward the top of the template.
- Write "top" at the top of the template.
- Width.
- Length at longest point.
- Inside Mount (always recommended) or Outside Mount.
- Amount of Window Frame Depth (where blind will mount).
- Control Side (Left or Right).
- Cord Length.

Angled Blind Measuring

A template is not required for Standard and Non-Standard Angled Blinds. Include measurements for each side of the window, and the length at the longest point.
